

KWANDEB MINING

COMPANY PROFILE / 2026

Built around the work on the ground.

BOTSWANA HEADQUARTERS

SERVING MARKETS ACROSS AFRICA

Kwandeb Mining

Mining services, resource partnerships and support across the mineral value chain.

OUR FOCUS

Mining & resources

Mining performance depends on what happens between the plan and the working face. Equipment must suit the task, materials must arrive when required and contractors need a clear understanding of their responsibilities. Kwandeb Mining brings these requirements into a coordinated commercial and operating brief.

Our focus spans operational support, equipment and materials sourcing, and structured participation in resource opportunities. Based in Botswana and serving African markets, we work with operators and specialist partners to define a scope that reflects the asset, its stage of development and the conditions on site.

A specialist business within the Revi Management operating portfolio.

What we do

01 Mining services

Support shaped around the mine and its operating plan.

We begin with the activity to be supported, the production environment and the interface with the operator. The resulting scope identifies required people, equipment, mobilisation needs and reporting responsibilities. Specialist work is coordinated with appropriately qualified delivery partners.

02 Equipment & supply

The right specification before the purchase.

Sourcing starts with duty, capacity, site conditions and the expected service life. We coordinate supplier requirements and commercial comparisons, including consumables, spares and support arrangements. This helps customers consider operating suitability alongside the initial purchase price.

03 Materials & logistics

Attention to every movement and handover.

Material handling requires an agreed route, suitable equipment and coordination between loading, transport and receiving teams. We help define these interfaces and the supporting documentation so that delivery expectations and responsibility for each stage are clear.

The wider service scope

04 Resource partnerships

Structured participation in credible opportunities.

Opportunities are considered against technical information, commercial assumptions and the capabilities required for delivery. Partner roles, decision rights and exposure to risk must be understood before a participation structure can be developed.

05 Project mobilisation

Preparation that connects plans to site activity.

Early support can include scope definition, supplier coordination and mobilisation planning. Attention is given to dependencies such as access, equipment availability and operator requirements. The delivery plan sets out what must be ready before work starts.

06 Local participation

Capability that stays close to the operation.

A local supply chain works best when businesses understand the standards they need to meet. We seek opportunities to involve capable local suppliers and service providers in clearly scoped work, with expectations for quality, communication and delivery made explicit.

03 / MARKETS & APPLICATIONS

Where the business fits

Mine operators	Operational support for established and developing mines, with scope matched to the asset and the operator's requirements.
Contractors & developers	Equipment, supplier and mobilisation coordination for defined work packages.
Industrial minerals	Materials handling and commercial support for quarries and related industrial supply chains.

A brief that becomes a working plan

The starting point is a clear requirement. The scope, partner roles and delivery arrangements develop around the customer, the market and the work to be done.

01

Understand the asset

Review the operating context, the required activity and the information available.

02

Define the work

Agree responsibilities, specifications and the interfaces with the mine and its contractors.

03

Mobilise capability

Coordinate suitable partners, suppliers and equipment around the delivery schedule.

04

Review performance

Track agreed outputs and resolve constraints through clear reporting and escalation.

A USEFUL FIRST CONVERSATION

Tell us the requirement, its location and the intended timing. A clear brief helps identify the relevant business and the next information needed.

05 / OPERATING PRINCIPLES

The standard behind the work

Safety in the scope

Site rules, competence requirements and risk controls belong in the work definition from the outset.

Technical suitability

Equipment and supply decisions must reflect the actual task and operating conditions.

Clear responsibility

Every work package needs an accountable lead and an agreed route for decisions.

Local relevance

A strong operation benefits from capable suppliers and relationships in its own market.
