

Ndeb Energy

COMPANY PROFILE / 2026

Power for the working economy.

BOTSWANA HEADQUARTERS

SERVING MARKETS ACROSS AFRICA

Ndeb Energy

Energy development, supply infrastructure and the Poktro fuel and roadside businesses.

OUR FOCUS

Energy & infrastructure

Energy connects production, movement and daily life. Businesses need an approach that reflects their demand, operating environment and plans for growth. Ndeb Energy brings these considerations together across energy opportunities and related infrastructure.

Within the group structure, Ndeb Energy also connects Poktro's fuel depots and retail business with Poktro Truck Park. This gives the energy portfolio a direct relationship with road users, commercial fleets and the infrastructure supporting regional trade.

The energy portfolio includes Poktro Retail and Poktro Truck Park, as shown in the supplied group organogram.

What we do

01 Energy development

Demand provides the starting point.

We consider the customer's operating requirements, the use of energy and the conditions at the site. This informs the technology and partner discussions needed to develop an appropriate concept. Commercial assumptions and delivery responsibilities are established alongside the technical brief.

02 Industrial energy

Continuity matters to production.

Energy requirements differ across industrial activities. We work from the load, operating pattern and business priorities to frame the opportunity. The scope may involve suitable supply infrastructure, partner coordination or development support for a defined requirement.

03 Fuel depots & retail

Poktro's role within the energy portfolio.

Poktro Retail brings the fuel proposition closer to motorists, fleets and communities. Its scope combines fuel infrastructure and forecourt requirements with convenience services. Individual opportunities are developed around location, customer demand and the operating standards required.

The wider service scope

04 Roadside infrastructure

Truck parks that support the transport economy.

Poktro Truck Park focuses on organised parking, driver amenities and useful services for commercial road users. Its position within Ndeb Energy connects the energy portfolio to the needs of fleets and the trade corridors they serve.

05 Project coordination

Alignment between technical and commercial teams.

Energy projects require specialist input and a defined path through development. We coordinate the brief, partner roles and decision points, with attention to site requirements, implementation dependencies and the transition to operation.

06 Technology & partnerships

Suitability before selection.

Different energy technologies carry different operating and maintenance requirements. We bring appropriate specialists into the assessment and consider the long-term support model. The objective is a solution that fits the use case and can be managed over its service life.

03 / MARKETS & APPLICATIONS

Where the business fits

Industrial & commercial users	Energy opportunities shaped around the requirements of productive businesses.
Property & infrastructure	Energy considerations integrated with sites, buildings and their operating needs.
Road transport markets	Fuel, retail and truck-park services through the Poktro businesses.

A brief that becomes a working plan

The starting point is a clear requirement. The scope, partner roles and delivery arrangements develop around the customer, the market and the work to be done.

01

Understand demand

Establish the operating requirement and the conditions at the site.

02

Develop the concept

Align technology options, commercial assumptions and partner capability.

03

Coordinate the project

Agree responsibilities, milestones and the dependencies affecting delivery.

04

Plan operation

Consider maintenance, support arrangements and the standards needed after implementation.

A USEFUL FIRST CONVERSATION

Tell us the requirement, its location and the intended timing. A clear brief helps identify the relevant business and the next information needed.

05 / OPERATING PRINCIPLES

The standard behind the work

Demand first

A sound energy concept starts with the customer's requirements.

Appropriate technology

Technical choices must reflect operating conditions and support needs.

Responsible delivery

Project roles and applicable requirements need clear ownership.

Connected businesses

Poktro extends the portfolio into fuel, retail and roadside infrastructure.
